2/7/2018 - 5/7/2018

D3.js and the decision on submission of ChinaVis 2018

Regarding self-practice, The knowledge of web standards and D3.js refreshed on this week. I have to practice more, and I plan to buy the online course or may ask someone to guide me firmly.

About the ChinaVis, I merge the comments from the reviewers of ChinaVis into my paper template. Also, modified some issue that can change immediately. For these couple of weeks, 6-18 July, I have to leave, then I will come back to work and meeting with Tianye's team around 19 July. In the meanwhile, I will print out the hard copy of the paper and correct it manually. I will merge it into the template after I am back.

Lesson learned from this issue. I have to check plagiarism all the time before submitting the paper. Moreover, I should be aware of the sentences of articles I had reviewed.

Plan for the new version of the article, I will consider adding the data for the first half year 2018. Because it is a survey paper about state-of-art, I should make it fresh. I plan to finish this paper before the summer school. After that, I will work closely with Tianye's team.
